

Level 4

This is our Maternal and Child Program floor. Here we guide expectant mothers and families through the full continuum of obstetrical care, from prenatal assessment through delivery to post-partum care.

Our Neonatal Intensive Care Unit is designed to handle the challenges the very youngest babies can present, as you would expect for a provincially-designated Level 2 Nursery.

Our Child's Program outpatient clinics are also on this level, just a quick elevator ride from the portals of care entrance. These include the medical/surgical clinics, as well as the audiology and general paediatric clinics.

As part of our Maternal and Child Program, Humber River Hospital has dedicated Child Life Specialists. These specially-trained staff work with our younger patients and their loved ones to take some of the mystery and stress out of their care.

Hospitals can be intimidating places for young children: our Child Life Specialists are there to support them along the way.
